Experience

Software Developer at **Epigee Inc.** **Jul 2025 – Present**

- Built a **reconciliation platform** (Django, React, PostgreSQL) for finance teams managing many client accounts, with role-based access, **LLM-based ingestion** of statements and invoices, per-client dashboards, and split/part-payment reconciliation, cutting manual effort by **70%**.
- Designed a layered **matching engine** with multi-criteria rules, fallback logic, and approval-based learning rules that give explainable suggestions, auto-reconciling **75%** of records and cutting repeat reviews by **40%**.
- Replaced per-bank parsers with a **LangGraph pipeline** that extracts fields from 10+ bank layouts into a normalized schema, using transaction-count and debit/credit total checks to reach **90–95%** field accuracy.
- Developed a Django **email-triage service** that classifies insurance requests into 7 categories with an LLM, with an admin dashboard, an **audit trail**, and automated client follow-ups, tracking each request from arrival to resolution.
- Implemented a **RAG chatbot** (Qdrant, LangChain) over company policy and customer data, with chunking, embeddings, ingestion APIs, and source-cited answers, turning minutes of document search into seconds for internal teams.

Full Stack Developer Intern at **Zevise** **May 2025 – Jun 2025**

- Redesigned React.js lesson discovery and learning screens, improving mobile responsiveness across **10+ screens**.
- Built **JWT auth** with protected routes and token handling, and designed class-subject-chapter-topic DB schema.

Technical Projects

SpendWise | *React, TypeScript, Node.js, Express, PostgreSQL*

- Developed a **personal finance tracker** with authentication and pages for expenses, categories, budgets, and a dashboard, with REST APIs and paginated date-range queries responding in under **50 ms (p95)** on 10,000 transactions.
- Implemented **budget tracking** with spending alerts at 80% and 100% of the limit, sent once per threshold and recalculated automatically when expenses change.
- Added a **month-end report** with month-over-month comparison and budget overruns, computed with server-side **SQL aggregation**.

VistaVoyage | *React.js, Tailwind CSS, Firebase, Gemini API*

- Built an **AI trip planner** with a 6-step preference wizard that generates day-wise itineraries, stays, food, photo spots, nightlife, and budget breakdowns, with **Zod-validated** output and automatic Gemini **model failover** on quota errors.
- Implemented **single-day and per-section regeneration** with in-place editing, so users can rework part of a trip without losing the rest.
- Added neighborhood stay recommendations with Airbnb and Booking.com search links, **PDF export**, and saved trips with Firebase email authentication.

DocFlow | *Node.js, TypeScript, BullMQ, Redis, PostgreSQL, Docker*

- Designed an **async PDF processing pipeline** where uploads return a job ID in under **25 ms (p95)** and background workers extract and index text, with per-user full-text search.
- Added **exponential-backoff retries**, a **dead-letter queue**, and **idempotency keys** for fault tolerance.
- Load-tested with **k6** (100 users, 30% injected failures); a worker killed mid-run lost **0 of 324 jobs**.

Skills

Languages: C++, Python, JavaScript, TypeScript, SQL
Frameworks: React.js, Node.js, Express.js, Django REST Framework
Databases: PostgreSQL, MongoDB, Firebase, Qdrant, Redis
Tools: Git, GitHub, Postman, Docker
AI Integration: LLM API Integration, LangChain, LangGraph, RAG
CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems, System Design

Education

Guru Gobind Singh Indraprastha University **2021 – 2025**
B.Tech in Information Technology | CGPA: 9.2/10 *Delhi, India*

Sneh International School **2019 – 2020**
Class XII, PCM with Computer Science | Aggregate: 83% *Delhi, India*
